**Care of Laminate Surfaces, T-Mold, Bumper, PVC Edges and Urethane**

Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface, moving with the pattern and follow with a clean, dry soft cloth. When a wood edge exists, follow instructions found under "Care of Wood Edges and Veneer Surfaces" for edge.

**Care of Wood Edges and Veneer Surfaces**

Clean all surfaces frequently with water-dampened soft cloth, moving the cloth with the grain direction. Quickly buff dry. Immediately remove any liquids that come in contact with wood surfaces using a blotting action to absorb liquid. Lift objects to move them. Never pull them across the finished surface.

For an additional safeguard, use a protective surface pad. Doing so could ensure a lasting finish by protecting your furniture from possible damage caused by pens and sharp objects.

Avoid exposing furniture to extreme heat and cold or to wide humidity variances. Avoid exposing furniture to strong sunlight. Do not use soaps, commercial cleaners or harsh solvents (nail polish remover, acetates, etc.) as they will cause finish deterioration. If using a protective glass top, place spacer pads under the glass top to allow the wood to breathe.

**Care of Corian® Surfaces**

Clean regularly with a cloth or sponge wrung out in warm soapy water. You can also use ammonia-based cleaners or commercial cleaners recommended for use on Corian® surfaces. Wipe up any water spills immediately so as not to leave a film that makes the finish look blotchy.

**Care of Powder Coat Work Surfaces**

Clean with warm water and mild soap and rinse with clean, warm water. Windex Multi-Surface Disinfectant and Windex All Purpose cleaner can be used for deep cleaning. Using a pump spray bottle, apply a normal amount of cleaner onto a clean microfiber or paper towel. Wipe the desired area until dry. Do not spray directly onto the surface or let sit un-wiped for an extended period.

**Care of KrystalCast® Surfaces**

Clean with a dish soap and water mixture in a spray bottle with a Green Scotch Brite 3M scrub pad to loosen all dirt and goo (including oil and wine stains, etc). Dry with a clean dry rag. Do not use solvents such as acetone, lacquer thinner, gasoline, undiluted alcohol or benzene.

**Care of Powder Coat and Nickel**

Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface and follow with a clean, dry cloth to buff dry.

**Care of Chrome Bases**

Clean with a wet cloth or window cleaner. For scuff marks or heavy soiling, a non-abrasive automotive chrome polish can be applied as directed.

**Maintenance of Mechanical Parts**

Clean any lint or debris from the moving parts of the E-Z install tilt or folding base mechanisms. Do not apply lubricant. Mechanisms have been designed and tested to not require lubrication under normal conditions.

**Care of Upholstered Tack Panels**

For Versteel standard fabrics and vinyls, consult the back of the appropriate swatch card for cleaning codes and any specific instructions. For COM materials, consult with the individual textile manufacturer for cleaning codes and any specific instructions pertaining to your particular fabric.

**Fixed Configuration Conference Tops**

Conference tops may use fixed configurations to achieve larger than normal sizing and seating accommodations, but there are some specific items that must be considered. These large conference tops are generally greater than 60" wide and 240" long.

By contacting Versteel with your vision we can help you engineer and produce your table. Below is a list of important points we will address.

**MATERIAL YIELD**

Most laminate is available in a maximum sheet size of 60" x 144". Versteel can design shapes and linking configurations that will maximize material yield.

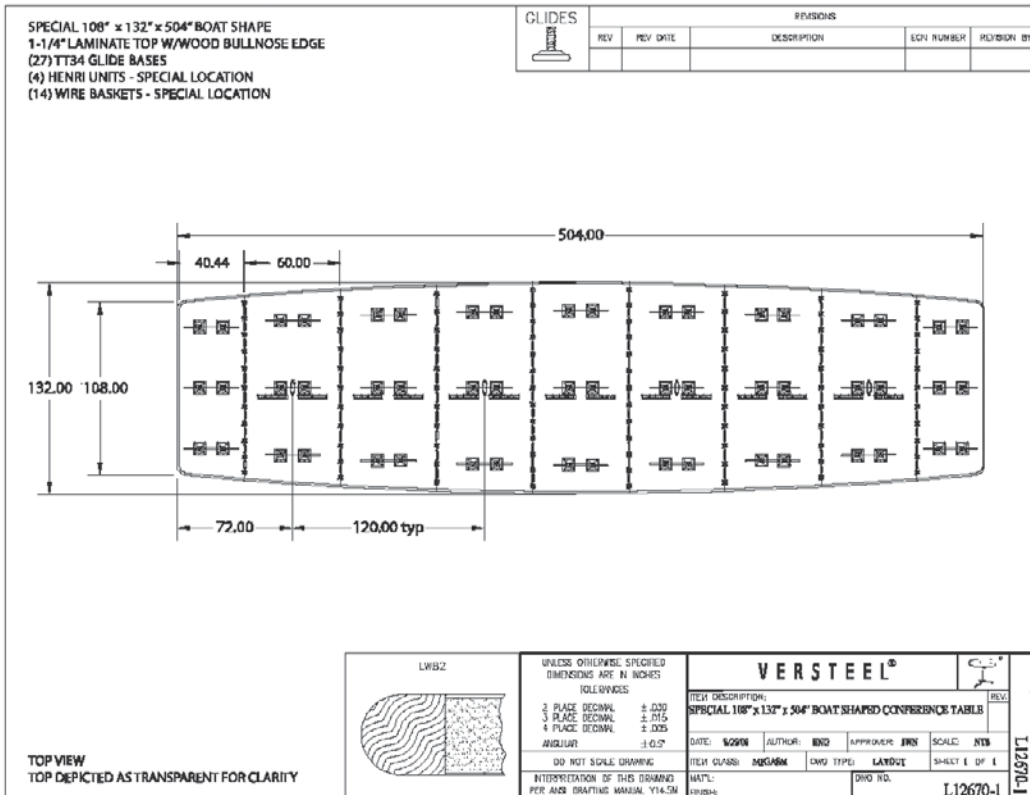

**LAMINATE PATTERNS**

Versteel can minimize seam lines by designing and positioning the linking configuration to take full advantage of your laminate pattern.

**BASES AND JOINTS**

Larger sections can be produced to limit the number of bases and joints required.

*At right is a typical Versteel drawing of a large, fixed configuration conference table. The extremely large size (504" x 132") required nine (9) sections and twenty-seven (27) bases. Power and data options have been incorporated into the drawing.*

### Configuration Guidelines

Often we receive requests to assemble room configurations that one would assume are very easy. But without the proper input, it is not so simple. Below are some common questions that will help to define your needs as well as enable us to help you specify your tables.

### Define Your Space

Start by asking yourself what you really want to accomplish in your room.

How will your room be used? Will you need breakout groups, is it a classroom with rows, or a boardroom? Do you need a T-shape, U-shape, or hollow square table group? Are there any special modifications that are specific to your application?

Besides the size of your room, here are some other items that you should take into consideration:

- instructor or speaker area
- wall with boards and/or audiovisual equipment
- door and window locations
- anything else which may interfere (columns, steps, ramps, HVAC, etc.)

### Define Your Needs

Your table considerations should begin by thinking about the need for the following items:

- modesty panels
- linking
- power and data
- wire management and grommets
- keyboard trays
- fixed, folding or tilt bases
- special needs (alternate or adjustable height)

Your seating considerations should begin by thinking about the need for the following items:

- assume a 30" width per person
- mobility (casters)
- stacking or storage issues
- usage and wear (upholstery or wood)
- adjustable height
- function (task specific or multiple)

*The following are general guidelines only. Always refer to local codes for restrictions and requirements.*

### Common Room Layout Guidelines

By using the guidelines below and the information that you supply (from answering the previous questions), Versteel can help you specify the tables and seating you need to make your space function at its maximum potential.

#### Between Rows Allow Four Feet (4')

If rows are used, four feet (4') between rows is considered adequate in order to provide space for movement.

#### Instructor Allowance of Eight - Ten Feet (8'-10')

A minimum of eight to ten feet (8' -10') should be allowed for the instructor's space, from the wall to the approach side of the first table row.

#### Back Wall Allowance of Seven Feet (7')

Space consideration for the back wall is necessary. A minimum of seven feet (7') from the back wall to the user's side of the last table is suggested.

#### Side Wall Allowance of Four Feet (4')

A minimum of four feet (4') from a side wall to the edge of a table should be incorporated into your configuration. Increase the distance for larger rooms.

#### Aisle Allowance of Four Feet (4')

If an aisle is needed, allow a minimum of four feet (4'). This dimension should increase with your room size.

*The drawing below illustrates the guidelines above.*

The following are general guidelines only. Always refer to local codes for restrictions and requirements.

Reference information here originally appeared in *Architectural Graphic Standards*, published by John Wiley and Sons; and in US Government publications for compliance with the ADA (Americans with Disabilities Act).

**Common Seating Dimension Requirements**

General spacing of thirty inches (30") of lateral space per chair at a table is standard. A minimum of twenty-four inches (24") may work, but will depend upon your chair style and table dimensions. Allow a minimum of thirty to thirty-six inches (30"-36") for wheelchair space at a table.

Most wheelchairs are designed to fit beneath a standard table with a twenty-nine inch (29") table top height. However, some wheelchairs require tables with tops at thirty-two inches (32") in height. Allow an additional twelve to eighteen inches (12"-18") in aisles where wheelchairs may be situated back to back.

A rule of thumb for cafeteria style seating is to allow a minimum of twelve square feet (12 ft<sup>2</sup>) for each seat.

**NOTE**  
A round table with a column base is often preferred for wheelchair disabled.

The following are general guidelines only. Always refer to local codes for restrictions and requirements.

Also, be sure to check US Government publications for compliance with the ADA (Americans with Disabilities Act).

**Minimum Table and Chair Space Allotments**

Below

- A** 36" minimum, 44" preferred

Below

- A** 6" minimum (with no passage)
- B** 2' 6" to 3' minimum (for passage)
- C** 1' 6" minimum (for limited passage)
- D** 3' minimum

If using square tables and seating, there should be a minimum of sixty-six inches (66") between tables. This allows for a thirty inch (30") aisle and two (2) chairs. Diagonal seating requires a thirty-six inch (36") minimum between table corners.

**Sample Space Use**

Below

- A** Conference Room
- B** Small Team Planning
- C** Large Team Planning

- E** Individual Work Areas
- F** Breakout Areas

Since every space has its own unique size and function, it is important that you consider the aforementioned guidelines when planning your space. Be sure to allow adequate space for aisles and plan your rooms around walls and other permanent fixtures such as doors or windows. Anticipate the type of activity that will be going on and plan enough space at the table for easy movement of personnel when seated.

Don't forget to consider power and data needs also. For help planning and selecting the power and data options that are right for your space, see pages 55-70.

### Essential Information

Like space planning with room configurations, we often receive requests to create power and data needs that one would assume are very easy. Below are some common questions that will help to define your needs and in turn will enable us to help you specify your tables.

### Which Solution Best Fits Your Needs

Ask yourself some basic questions to help define your specific needs.

**Is storage an issue?** Some tables may be folded or tilted with certain power and data sources in position, while others may require that the power and data source be removed for these functions. Make sure you consider the space that you will need to store all the parts of your configurations.

**Will you be moving your tables?** If your tables are going to be utilized in varied locations, you will want to ensure that you can easily disconnect and reconnect your power and data. Table Link - Ends Only is included with Henri and Powerlink electrical package options to prevent the accidental disconnection of power supply to adjacent tables.

**How will your tables be used?** Power and data choice may depend upon whether your tables will be task-specific or multipurpose. A single use may have different requirements than a multi-use configuration. Remember to consider the need for wire management and modesty panels also.

**Will your needs be changing?** You don't always know what your specific needs will be in the future, but you may want the ability to add power and data at a later date.

**Where is the power and data source for the room?** Before any power and data is specified for a table, it is important to know where the power will be coming from in your room. If you are plugging into existing outlets then the power feed for the table must be within six feet (6') of the outlet.

**Have you calculated the power load?** Power loads are measured in amps (abbreviated form of amperes). Your circuits will only handle so many amps so you need to know what you can safely plug in without causing an overload situation. Use the worksheet on the next page for a general idea.

### Selecting Your Power and Data Options

Select the best power and data option based on your particular need and application.

VERSTEEL

Wiring of voice and data jacks is the sole responsibility of the customer

**Technical Specifications**

Henri provides pop-up power and voice and data access. A built-in opening is provided for cables to be routed below the surface while up. Henri for linked table groups are powered from a single 9' cord, 15 amp standard grounded outlet plug with a circuit breaker and power surge protector. Voice and data plates can be ordered with one (1) high speed voice CAT3 and one (1) data CAT6 hardwire jacks as standard. LED light indicates when power is on. Optional data plates can be specified to accommodate other voice and data suppliers, contact Versteel Customer Service for details prior to order placement.

*UL Listing requires the limitation of eight (8) Henri units (two plugs per Henri) on a single plug power entry.*

Based on the National Electrical Code, it is not recommended to exceed a 12 amp equipment load per power infeed. See chart with amp load worksheet on page 56.

Each Henri is shipped installed in the table top and includes all necessary cables and cord mounting clips in order to complete the electrical installation. Henri is not retrofittable. However

, if a brush grommet has been previously installed in your table, then it is possible to insert a Henri at a future date.

**Henri Planning and Locations**

Provide a sketch of your table configuration indicating the power/data sources in the room and Versteel Customer Service will verify or help you specify the power/data solution that will best suit your needs.

Common table configurations with standard power and data locations may be found in the electrical planning section on pages 55-70.

**CONSIDER**

How many Henri units in each table?

Where are the power and data sources in the room?

Are the tables within a six foot (6') radius of the power sources?

What are the expected table configurations of the room?

Location D H60D3L16, (3) 60" Tables, Linked, Left Power

A **H60D3L16** is a Henri sequence with three (3) 60" tables and the Henri units in Position D. Power enters from the user's left.

Location E H60E3L16, (3) 60" Tables, Linked, Left Power

A **H60E3L16** is a Henri sequence with three (3) 60" tables and the Henri units in Position E. Power enters from the user's left.

**Custom Location Print**

Below are three easy steps for supplying a print that places Power & Data units in a custom location.

**Step 1**

Indicate where you want your Power & Data units located in the top. Use center lines for marking positions. Versteel will review your location requests to make sure that they do not interfere with base locations and their attachment.

**Step 2**

Indicate the face of all Power & Data units to determine which way the power outlets, voice jacks and data jacks will be accessed.

**Step 3**

Indicate where the Power & Data sources are located within the space. The orientation of the table(s) within the space will also help to determine the best possible access point.

It's that simple. Call Versteel Customer Service if you have any questions regarding Power & Data Custom Locations.

*Boatshape conference table with four units. Power is located in the center of the table and the units alternate sides facing the users.*

*Square table with four units. Power is located to the side of the table and the units each face a user.*

*Two (2) square tables linked with two (2) units each. Power is located to the side of the table and the units face outwards.*

**Sample Print**

*Special Electrical four (4) units located in one (1) table on the center line of the table with 30° between units.*

*Wiring of voice and data jacks is the sole responsibility of the customer*

**Single Circuit Powerlink Technical Specifications**  
**Powerlink provides horizontal power, voice and data access as well as cable management.**

Powerlink Single Circuit system allows several tables to be powered from a single 15 amp standard grounded outlet plug which will power up to eight (8) duplex outlets per sequence. Circuit breakers and power surge protectors for single or sequenced Powerlinks are at the infeed.

*UL Listing requires the limitation of eight (8) Powerlink 42" and 48" length (two plugs per Powerlink) or four (4) Powerlink 60", 72", 84" and 96" length (4 plugs per Powerlink) on a single plug power entry.*

**Single Circuit and Powerlink Technical Specifications**

Voice and data plates are installed in the Powerlink cover with one (1) high speed voice CAT3 and one (1) data CAT6 hardwire jacks as standard. Data plates can be specified to accommodate other voice and data suppliers, contact Versteel Customer Service for details prior to order placement.

Mounting lever locks are factory installed in the bottom front edge of the table. Powerlink installs without the use of tools, in the above table top facing user, below table top facing out or below table top facing user positions.

Each Powerlink unit includes all necessary hardwire connection or flex conduit jumpers, covers and hardware to complete the electrical installation.

Powerlink may be retrofitted to Versteel Class E tables only. Check your Versteel table product label located on the underside of the table top to determine if your table is Class E.

Based on the National Electrical Code, it is not recommended to exceed a 12 amp equipment load per power infeed. See amp load worksheet on page 56.

**Planning and Locations**

Provide a sketch of your table configuration indicating the power/data sources in the room and Versteel Customer Service will help you specify the power/data solution that will best suit your needs.

Common table configurations with standard power and data locations may be found in the electrical planning section on pages 55-70. Powerlink will always be top mounted facing user unless specified differently.

**CONSIDER**  
 Where are the power and data sources located in the room?

What are the expected table configurations of the room?

*Powerlink Single Circuit with power infeed. Face drops to allow easy access to wire management channels and linking connections.*

*Powerlink with sequencing connection mounted above table top, facing user.*

*Powerlink mounted below table top, facing out.*

*Powerlink with sequencing connection mounted below table top, facing user.*

*Powerlink can be repositioned in any of the above positions by using the Powerlink lever lock. No tools are required*

The shaded sphere has a six foot (6') radius to indicate the length of the power cord at floor level.

The black center references the power source location.

**SCALE**  
Approximate scale for measuring is 3/32.

**CONSIDER**  
What is the purpose of the room?

Where are the power and data sources in the room?

Are the tables within a six foot (6') radius of the power sources?

The configurations illustrated on these pages are meant to show possible options using similar power sources.

**Configuration 7**

**Powerlink Single Circuit (for arc rectangle top shape)**

An amphitheater style classroom or training room with a single aisle. Power sources are located along the aisle and service linked tables with hardwired multi-circuit power. Instructor table has its own single circuit outlet power supply.

The black center references the power source location.

**Connecting Data/Voice Systems To Your Network Grid**

Multiple options are available when specifying data/voice connections for power/data systems in Versteel tables. The appropriate option is dependent upon your specific application.

**UNWIRED CONNECTIONS**

Unwired data/voice connections need to be wired by the customer's IT department, or an outside IT provider. Unwired connections are "standard" for the following products:

- Henri/Henri Now
- Powerlink
- Power Bay
- Powered Form Modesty

*(Unwired connections are optional for all other power/data systems offered by Versteel.)*

**PREWIRED CONNECTIONS**

Prewired data/voice connections terminate with a "male" patch cable connector on the end. This enables the unit to be plugged directly into a data wall plate. A 10' cable is standard for data connections, and a 7' cable is standard for voice connections. Prewired connections are "standard" for the following products:

- Axil Z
- Ellora
- Mho
- Node

**DATA COUPLERS**

Installed directly in the power/data unit, couplers are "female" jacks that allow units to be connected to a data wall plate with a standard data patch cable (with "male" jacks on each end). This is a convenient option for tables that will be moved frequently.

Data Couplers are available on all power/data units, excluding Henri and Henri Now (*Henri Quick Connect provides the same functionality as a data coupler for Henri and Henri Now*).
